PROBLEM + SOLUTION

CHEATING DURING INTERVIEW WITH AI

- CANDIDATES ANSWER VERBALLY DURING THE INTERVIEW. THE SYSTEM CONVERTS SPEECH TO TEXT AND USES AI TO DETECT AI-GENERATED PATTERNS. SUSPICIOUS RESPONSES ARE FLAGGED FOR THE INTERVIEWER.

PAST DATA GOES UNUSED.

- AI LEARNS FROM PAST INTERVIEWS TO IDENTIFY RESPONSE PATTERNS AND INTERVIEWER DECISIONS. IT USES THIS INSIGHT TO GENERATE SMARTER, MORE RELEVANT FOLLOW-UP QUESTIONS.

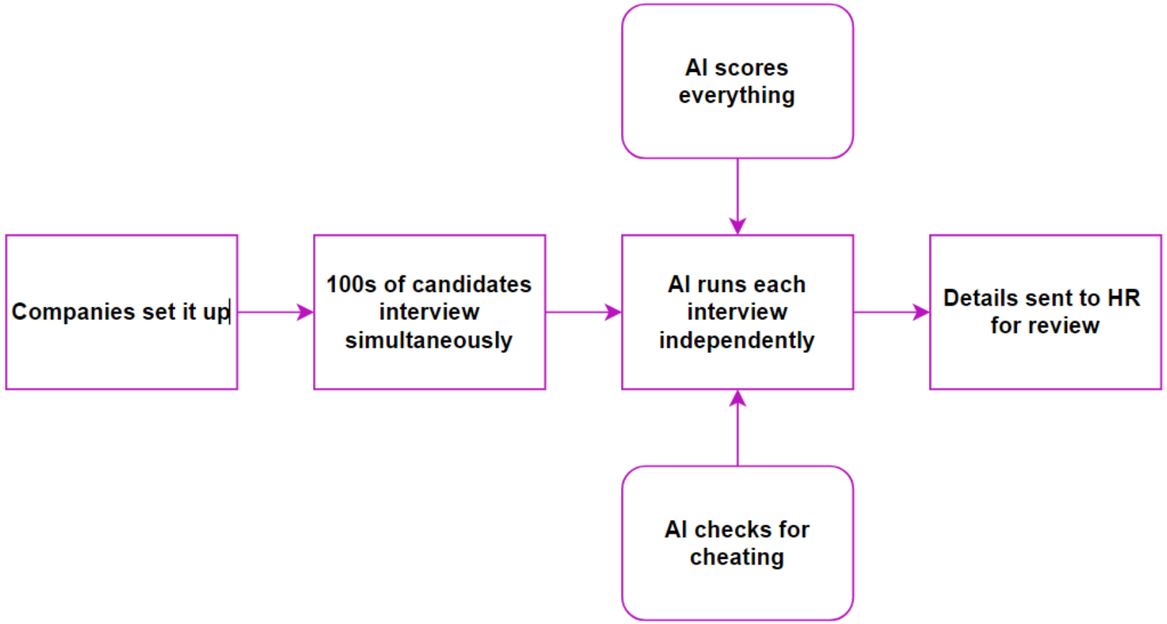
AI HALUCINATES QUESTION

- RAG RETRIEVES REAL JOB DATA TO GENERATE INTERVIEW QUESTIONS. THIS KEEPS QUESTIONS GROUNDED IN THE ACTUAL ROLE AND PREVENTS MADE-UP CONTENT.

LACK OF COMPANY-SPECIFIC TRAINING

- THE AI ADAPTS TO THE SKILLS AND QUALITIES YOUR COMPANY VALUES. INSTEAD OF USING GENERIC HIRING STANDARDS, IT LEARNS FROM YOUR ORGANIZATION'S PAST HIRING PATTERNS TO EVALUATE CANDIDATES MORE ACCURATELY.

ARCHITECTURE - HOW IT WORKS



- VOICE-TO-TEXT — WHISPER TRANSCRIBES LIVE SPEECH INSTANTLY
- SMART QUESTION ENGINE — ANSWER + JOB DESCRIPTION FED TO AI TO GENERATE BETTER AND SPECIFC QUESTION
- MEMORY LAYER — FULL CONVERSATION PASSED TO AI FOR CONTEXTUAL FOLLOW-UPS
- CHEAT DETECTION — FLAGS RESPONSES THAT SOUND AI-ISH
- CANDIDATE EVALUATION SYSTEM BASED ON COMPANY RULES, REFINED AFTER EACH HIRE
- PARALLEL SESSIONS — 100S OF CANDIDATES IN ISOLATED SESSIONS SIMULTANEOUSLY
- HR REPORT — SCORES, FLAGS, TRANSCRIPTS → ONE RANKED OUTPUT

$$\text{Final Score} = \left(\text{Round_Weight} \times \sum \text{Question_Score}\right) \times \text{Consistency_Multiplier} \times \text{Integrity_Multiplier}$$
